DETAILED ACTION

Allowable Subject Matter

Claims 1-4 and 6-10 are allowed.

The closest prior art to the instant invention is Cortez (U.S. Patent No. 3,512,561). Cortez teaches a tool having a multi-teeth beveled cutter/saw blade (90) with teeth shaped in a generally triangular form and terminating in a pointed end, a flat cutting side and it's greatest diameter facing the workpiece (see figure 2). Cortez also teaches a balancing unit (20) having an electric motor (94) for driving the cutter. Furthermore, Cortez teaches frame (20) being pivotally connected to the carriage (22) for movement in the vertical plan such that the cutter's axis of rotation forms an acute angle to the axis of rotation of the workpiece in the vertical plane (figure 2 and Col.3, lines 44-49).

However, there is no suggestion in Cortez's teaching to provide means to position the cutter such that its axis of rotation forms an acute angle to the axis of rotation of the workpiece in the horizontal plane.
